

Iris availability list

About Iris:

The following list contains Bearded Iris forms which require good light and drainage and must be planted so their rhizome is not buried below soil level. Give them space in the border so the rhizomes can be baked by the sun. This guarantees good flowering. The scent of Bearded Iris is heavenly not only for gardeners but also for the pollinators – for bees and insects it is an extra draw to the flowers.

Iris ‘Actress’
